MEDCu COPPER

Most antimicrobial dressings focus solely on reducing bacterial load. However, **MEDCu is made of copper**. This means it effectively manages bio-burden, whilst simultaneously promoting wound healing. As a natural mineral, it poses no risk of toxicity.

Areas for use:

- Diabetic Wounds
- Leg & Foot Ulcers
- Pressure Ulcers
- First & Second-Degree Burns
- Surgical Wounds
- Arterial Ulcers
- Venous Stasis Ulcers

KEY FEATURES COMPARISON

	MEDCU	SILVER
Supports skin regeneration	✓	✗
Physiological role in skin repair	✓	✗
Stimulates angiogenesis	✓	✗
Supports collagen & elastin production	✓	✗
Promotes re-epithelialisation	✓	✗

Powerful Antimicrobial Efficacy
Copper ions destroy bacterial cells including antibiotic-resistant strains and even those within biofilms

Safest Choice – Any Patient
As an essential mineral to the human body, copper can safely be used on adults, children and infants.

Faster Healing Progression
Copper plays a critical biological role in tissue regeneration, enabling ultra-fast healing.

Why It Matters for the NHS
Cost-effective compared to prolonged silver use, helping to improve outcomes while managing spend.
